Open to opportunities anywhere in the world, whether on-site, hybrid or remote

Summary

Information Systems graduate (FIAP, 2025) with **3 years in an environment where mistakes cost money**: a credit authorization platform processing **over 1 million transactions per day** for clients such as Porto Seguro and Bradesco. Used to making fast decisions with incomplete information, negotiating priorities directly with clients and backing decisions with data.

In my undergraduate research project, ranked among the top 30, I proposed a credit risk model that weights each company by its **supply chain**. I want to bring this mix of software, observability, data and AI to teams that run critical systems in production.

Experience

Junior Systems Analyst | THCS | 2025 – present

- Point of contact for clients such as Porto Seguro and Bradesco during production support and critical changes, aligning priorities and deadlines directly with client managers.
- Take part in production incident response, making decisions under pressure and with incomplete information to restore service with minimal impact.
- Turned load-test results into a clear server-sizing recommendation for Porto Bank (8 GB RAM, 4 cores, 200 GB), which informed the client's investment decision.
- Work on the payment dispute (chargeback) system, building its audit trail, logging and monitoring.
- Test and debug applications in production; wrote the test documentation the client adopted as its quality standard.

Full Stack & Observability Intern | THCS | 2023 – 2025

- Built KPI dashboards in Grafana for Porto Bank, from prototype to delivery, simplifying daily tracking of transaction volume.
- Defined metrics and alert rules to flag risks before they turned into client-facing failures.
- Developed full stack features in Java and TypeScript.

Analytical Projects & Leadership

Corporate Credit Risk Classification with Machine Learning | Undergraduate Research, FIAP · *ranked among the top 30 projects*

- Proposed using each company's supply chain as a weighting factor in the risk model, mapping supplier and customer relationships in a graph database.

Personal Finance Assistant with an AI Agent | Capstone Project, FIAP

- Led the team building a goal-based personal finance app with an AI agent that guides the user.
- Set the team's development practices and prioritized deliveries by user value.

Education

- **B.S. in Information Systems** — FIAP, 2022 – 2025. Relevant coursework: Python for data analysis and Machine Learning, SQL, Data Warehousing.
- **Data Science Bootcamp** — TripleTen, 2025 – 2026 (in progress).
- **Postgraduate Degree in DevOps & Cloud Architecture** — FIAP, 2026 – 2027 (in progress).

Skills

- **Data analysis:** Python, SQL, building KPIs and dashboards for daily tracking.
- **Risk:** credit risk modeling with Machine Learning; monitoring and alerting to anticipate failures.
- **Relationships & negotiation:** direct support to financial-sector clients; aligning priorities and deadlines with managers.
- **Technology:** application testing and debugging, automation of recurring tasks.
